

TIME AND SAVINGS

From the moment a vehicle is received on the lot to the moment it is sold, time is money. Getting it inventoried, photographed, and posted on the web quickly and accurately is critical. The VCI System is synonymous with speed, accuracy, and winning.

Our VCI system is versatile and packed with time saving and cost benefits. When compared to traditional methods of inventory entry involving paper forms, duplicate data entry, transcription errors, and incomplete web data, the VCI System makes sense while saving dollars. We challenge you to compare VCI to your current process.

Used Car Inventory over
faster?**

Introducing

Vehicle Check In System

Equipping You to Compete

SYSTEM BASICS

The Vehicle Check In System, VCI, was developed to address time and error related issues of the inventory process in the used car market. Fast and accurate VIN decoding, "On the Lot" data entry, automatic upload to multiple web malls, and comprehensive photo management enable your vehicles to get in front of your customer **faster**.

SIMPLE. While inspecting the incoming vehicles, the dealer can begin the process of inventorying with a Personal Digital Assistant (PDA) equipped with a scanner.

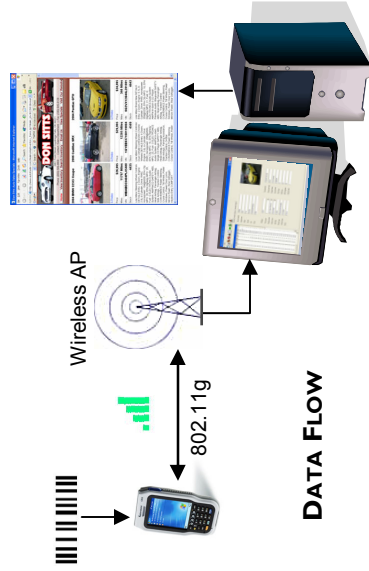

ACCURATE. Scanning the 17-digit bar coded VIN provides accuracy and reliability. VIN barcode scanning is 50X faster and 10,000X more accurate than manual data entry.* VIN transcription errors are eliminated!

* Socket Communications, Inc., www.socketcom.com

THOROUGH. Equipped with a photo editor/manager, the system provides the tools to uniformly integrate photos along with the vehicle's other data. Marketing data has shown that vehicles posted on the internet with photos receive 275% more traffic than those without.**

** Mannheim News, May 2002, Vol. 8 No. 4

EFFICIENT. Once checked in, the vehicle data can be uploaded to the VCI Publisher for detailed review, modification, and photo additions. Vehicles are sent to multiple web malls daily.

DATA FLOW

SYSTEM COMPONENTS

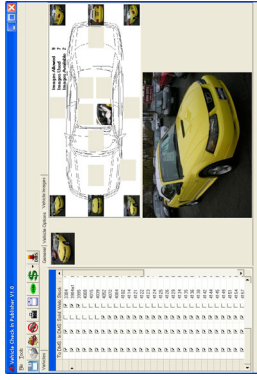

PDA WITH SCANNER

Wireless technology allows for VIN scanning and immediate decoding, providing available manufacturer information. Stock numbers are automatically assigned. Minimal entry required.

PHOTO EDITOR/MANAGER

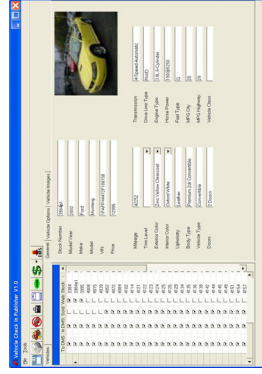

The first class Photo Editor provides intuitive photo placement of vehicle images, manages file size to save upload time, and guarantees resolution and compatibility for web malls making for consumer friendly shopping.

VEHICLE

INVENTORY PUBLISHER

Wireless upload from the PDA to the VCI Publisher allows the information to be modified, sent to your web malls, and possibly integrated with your DMS. Additionally, it has the capability of printing stock sheets and window display stickers.

54% off all late-model used-vehicle buyers use the internet for vehicle shopping.

— JD Powers and Associates, 2004 Used Autosopper.com Study

BENEFITS & MORE

BENEFITS

- * One time data entry of vehicle information
- * Accurate and fast VIN decoding
- * Simplified picture management
- * Reduced employee handling time
- * Faster turn around time from check-in to market
- * Printable data sheets and window stickers
- * Easy to use

CUSTOMER SERVICE

Minimal time is required to get the system up and running and same day support provides the best service possible.

"We have been extremely happy with support response time when needed."

— Rob Sitts, President, Don Sitts Auto,
OJADA State Quality Dealer of the Year

— Dave Lacey, Lot Manager, Don Sitts Auto

HARDWARE AND SOFTWARE COMPONENTS

- Rugged PDA/Scanner
- PDA Data gathering software
- VCI Publishing software

SYSTEM REQUIREMENTS

- Networked computer with MS Windows 2000 or later
- High speed internet access
- 802.11g wireless connectivity

CAN YOU AFFORD TO WAIT?

Portable user-friendly hardware and wireless technology is no longer the future, it is the PRESENT. The VCI System is that technology working for **your business, your bottom line,** and **your success.** Can you afford to wait?
